

<p>1. Profile of the Partner Cities</p>	
<p>LP City 1</p>	
<p>1. Local challenges of city partners specific to the network theme</p>	<p>A problem to which the city of Targu Frumos wants to find a solution through this network is that of individual car garages. For over 30 years, the town hall has rented plots of land to citizens to build car garages. Over the years, many garages of this kind have appeared, constructions that no longer comply with the urban planning regulations and that have deteriorated or that no longer comply with the functionality for which they were intended. This was a general problem at the level of Romania, until now only a few large municipalities had the "courage" to terminate the rental contracts and demolish the garages. The biggest problem is the opposition of the citizens, even if in many situations modern parking solutions have been proposed. We want the lands occupied by some degraded and ugly constructions to be transformed into modern and as green spaces as possible.</p>
<p>1. Local strategic framework of the city specific to the network theme</p>	<p>In order to solve the problem, the city hall initiated public consultations both with the citizens of the city and with their representatives from the Local Council. We are looking for solutions as well as sources of financing for the construction (where possible) of underground parking lots or the arrangement of covered above-ground parking lots, equipped with photovoltaic panels as well as charging stations for electric or plug-in cars. Considering the reluctance of the citizens, we want to do a mini-project during the development of this project with the arrangement of a parking lot of approximately 20 parking spaces on a land occupied by garages located in the vicinity of the town hall.</p>
<p>1. Local links to Sustainable Urban Development through Cohesion Policy</p>	<p>The realization of the Social Multifunctional Center with European funds, through the Ministry of Regional Development and Public Administration, led to the improvement of the quality of service infrastructure social in the city of Targu Frumos . Partnerships concluded with NGOs operating within the area the city of Targu Frumos within the Multifunctional Center and the activities carried out ensure an access improved citizens' access to social services and contributes to increasing the quality of life of assisted persons, such as and promoting social inclusion for vulnerable social categories.</p>

	<p>Among the NGO s that carry out their activity within the Social Multifunctional Center we mention "Bethany Social Services Foundation", "Ancora Salvării" Foundation, "Star of Hope" Foundation, "Salvați Copii" Association - Iași branch.</p>
<p>1. Motivation and commitment of each city to join the network</p>	<p>Participating in a program will bring countless future possibilities to the institution and our community by acquiring knowledge and skills that would otherwise be acquired in a much longer period of time and with the involvement of very high costs.</p> <p>Having with us in this network partners with rich experience will help us to more easily overcome the obstacles that will arise in the implementation of future projects.</p>
<p>1. Added value of being involved in an URBACT network</p>	<p>Our experience as communication at the European level is somewhat limited, and we want to learn from the achievements of those with much more experience than ours. We consider that our biggest asset is the enthusiasm and the young team and the desire to learn as many things as possible.</p> <p>Participating in the URBACT network is an experience that we want and we regret the fact that we have only just discovered this program. We want to be an example for other localities in this area in the future.</p>
<p>1. Local Stakeholders to be involved in the URBACT Local Group</p>	<p>People from the Community Assistance Service, NGOs, representatives of the business environment (representatives of the biggest employers in the city TEOVAL &CO SRL, TAT-TAC SRL, EKY-SAM SRL, NOVA-MIRO SRL) will be involved. There will also be representatives of civil society .</p> <p>Within the project, we will try to involve the representatives of the owners' associations, the associations that are currently in an extensive process of restructuring and reorganization.</p>
<p>1. Potential for actions to be funded/ implemented</p>	<p>we want to do a mini-project during the development of this project with the arrangement of a parking lot of approximately 20 parking spaces on a land occupied by garages located in the vicinity of the town hall.</p>
